

**Syllabus for Sri Dev Suman Uttarakhand  
University, Badshahithaul, Tehri (Garhwal)  
and Affiliated Colleges**

**UG & PG PHYSICS  
SYLLABUS**

**2023**

**Sri Dev Suman Uttarakhand University  
Badshahithaul, Tehri (Garhwal)**

## Curriculum Design Committee, Uttarakhand

| S. No. | Name & Designation  |
|--------|---|
| 1.     | Prof. N.K. Joshi<br>Vice-Chancellor, Sridev Suman Uttarakhand University, New Tehri<br>Chairman |
| 2.     | Vice-Chancellor, Kumaun University, Nainital<br>Member  |
| 3.     | Prof. Jagat Singh Bisht<br>Vice-Chancellor, Soban Singh Jeena University Almora<br>Member       |
| 4.     | Prof. Surekha Dangwal<br>Vice-Chancellor, Doon University, Dehradun<br>Member                   |
| 5.     | Prof. O. P. S. Negi<br>Vice-Chancellor, Uttarakhand Open University, Haldwani<br>Member         |
| 6.     | Prof. M.S.M. Rawat<br>Advisor, Rashtriya Uchchar Shiksha Abhiyan, Uttarakhand<br>Member         |
| 7.     | Prof. K. D. Purohit<br>Advisor, Rashtriya Uchchar Shiksha Abhiyan, Uttarakhand<br>Member        |

## Syllabus Preparation Committee

### A: Department of Physics, Sri Dev Suman Uttarakhand University Pt. Lalit Mohan Sharma Campus, Rishikesh

| S.N. | Name                       | Designation         |
|------|----------------------------|---------------------|
| 1.   | Dr. Yogesh Kumar Sharma    | Professor & Head    |
| 2.   | Dr. Manoj Yadav            | Professor           |
| 3.   | Dr. Bimal Prakash Bahuguna | Professor           |
| 4.   | Dr. Hemant Singh           | Associate Professor |

### B: Experts from Other Institutions

| S. N. | Name                     | Designation and Address  |
|-------|--------------------------|--|
| 1.    | Prof. G. K. Dhingra      | Dean, Faculty of Science, Pt. L.M.S. Campus Rishikesh                                |
| 2.    | Prof. L. P. Purohit      | Professor, Department of Physics, Gurukula Kangri (Deemed to be) University Haridwar |
| 3.    | Prof. Pushpa Negi        | Principal & Professor of Physics, Govt. P. G. College, New Tehri                     |
| 4.    | Prof. Pankaj Pant        | Principal, Govt. P. G. College, Nagnath Pokhari                                      |
| 5.    | Prof. Kuldeep Singh Negi | Principal, Govt. P. G. College, Khanpur  |
| 6.    | Prof. Anita Rawat        | Director, USERC, Dehradun  |

**National Education Policy-2020**

**Syllabus for Sri Dev Suman Uttarakhand  
University and All Affiliated Colleges for B.Sc. in  
Physics.**

**2023**

**List of Papers in Six Semesters (B.Sc.Degree)  
Semester-wise Titles of the Papers in Physics**

| Year                                       | Sem.    | Course Code | Paper Title  | Theory/<br>Practical | Credits |
|--|---------|-------------|--|----------------------|---------|
| <i>Certificate Course in Basic Physics</i> |         |             |  |                      |         |
| FIRST<br>YEAR                              | Sem I   | CPT1001     | Mechanics  | Theory               | (04)    |
|  |         | CPP 1002    | Mechanical Properties of Matter  | Practical            | (02)    |
|  | Sem II  | CPT 1003    | Electricity and Magnetism  | Theory               | (04)    |
|  |         | CPP 1004    | Demonstrative Aspects of Electricity & Magnetism                       | Practical            | (02)    |
| <i>Diploma in Applied Physics</i>          |         |             |  |                      |         |
| SECOND<br>YEAR                             | Sem III | DPT 2001    | Thermodynamics and Statistical Physics                                 | Theory               | (04)    |
|  |         | DPP 2002    | Demonstrative Aspects of Thermal Properties & Statistical Physics      | Practical            | (02)    |
|  | Sem IV  | DPT 2003    | Optics   | Theory               | (04)    |
|  |         | DPP 2004    | Demonstrative Aspects of Geometrical and Physical Optics               | Practical            | (02)    |
| <i>Bachelor of Science</i>                 |         |             |  |                      |         |
| THIRD<br>YEAR                              | Sem V   | BPT3001     | Solid State Physics  | Theory               | (04)    |
|  |         | BPP3002     | Demonstrative Aspects of Solid State Physics                           | Practical            | (02)    |
|  |         | BPT 3003    | Basic Electronics  | Theory               | (04)    |
|  |         | BPP 3002    | Demonstrative Aspects of Basic Electronics                             | Practical            | (02)    |
|  | Sem VI  | BPT 3003    | Modern Physics & Elementary Quantum Mechanics                          | Theory               | (04)    |
|  |         | BPP3004     | Demonstrative Aspects of Modern Physics & Elementary Quantum Mechanics | Practical            | (02)    |
|  |         | BPT 3005    | Analog and Digital Electronics   | Theory               | (04)    |
|  |         | BPP 3006    | Demonstrative Aspects of Analog & Digital Circuits                     | Practical            | (02)    |

**Subject prerequisites:**

1. For Semester I: 12<sup>th</sup> pass with subjects Physics, Chemistry & Mathematics
2. For Semester II: Passed Semester I with Physics
3. For Semester III: Passed Semester II with Certificate Course in Basic Physics
4. For Semester IV: Passed Semester III
5. For Semester V: Passed Semester IV with Diploma in Applied Physics
6. For Semester VI: Passed Semester V

|  |  |
|--|--|
| <b>Programme outcomes (POs):</b>   |  |
| Students having Degree in B.Sc. (with Physics) should have knowledge of different concepts and fundamentals of Physics and ability to apply this knowledge in various fields of academics and industry. They may pursue their future career in the field of academics, research and industry.  |  |
| <b>PO 1</b>  | <ol style="list-style-type: none"> <li>1. Competence in the methods and techniques of calculations using Mechanics.</li> <li>2. Students are expected to have hands-on experience to apply the theoretical knowledge to solve practical problems.</li> </ol>   |
| <b>PO2</b>   | <ol style="list-style-type: none"> <li>1. Students are expected to have deep understanding of electricity and magnetism.</li> <li>2. Student should be able to make basic electrical circuits and handle electrical instruments.</li> </ol>  |
| <b>PO 3</b>  | <ol style="list-style-type: none"> <li>1. Competence in the concepts of Thermodynamics and Statistical Physics.</li> <li>2. Students are expected to have hands on experience in Thermal and Statistical Physics Experiments.</li> </ol>   |
| <b>PO 4</b>  | <ol style="list-style-type: none"> <li>1 Knowledge of different concepts in Geometrical and Physical Optics.</li> <li>2 Students are expected to have hands on experience of Experiments of Geometrical and Physical Optics.</li> </ol>  |
| <b>PO 5</b>  | <ol style="list-style-type: none"> <li>1. Knowledge of basic concepts of solid state physics with their applications.</li> <li>2. Students are expected to have an insight in handling in solid state and basic electronic instruments.</li> </ol>   |
| <b>PO 6</b>  | <ol style="list-style-type: none"> <li>1. Comprehensive knowledge of modern physics, elementary quantum mechanics, Analog &amp; Digital electronics and their Applications.</li> <li>2. Learn the integrated approach to analog electronic circuitry and digital electronics for R&amp;D.</li> </ol> |
| <b>Programme specific outcomes (PSOs):</b><br><b><i>UG I Year / Certificate course in Basic Physics</i></b>  |  |
| After completing this certificate course, the student should have <ul style="list-style-type: none"> <li>• Acquired the basic knowledge of Mechanics, Electricity and Magnetism.</li> <li>• Hands-on experience to apply the theoretical knowledge to solve practical problems of basic physical phenomena. He should be able to carry out experiments to understand the laws and concepts of Physics.</li> <li>• An insight in understanding electrical circuits and in handling electrical instruments.</li> </ul>   |  |
| <b>Programme specific outcomes (PSOs):</b><br><b><i>UG II Year/ (Diploma in Applied Physics)</i></b>   |  |
| After completing this diploma course, the student should have <ul style="list-style-type: none"> <li>• Knowledge of different concepts in Thermodynamics, statistical physics, Geometrical and Physical Optics.</li> <li>• Knowledge of different aspects of Thermal Physics and Statistical Mechanics which serves as a basis for many physical systems used in industrial applications and deals with the physics and technology of Engines and Refrigerators.</li> <li>• A deeper insight in Ray Optics to understand the Physics of many optical instruments which are widely used in research and Industry, Optoelectronics, IT and communication devices, and in industrial instrumentation.</li> <li>• Knowledge of basic concepts of optical instruments with their applications in technology.</li> </ul> |  |

| <b>Programme specific outcomes (PSOs):<br/>UG III Year / Bachelor of Science</b> |   |
|--|---|
| After completing this degree course, the student should have:                    |   |
| <b>PSO 1</b>   | <i>Knowledge of Mechanics and basic properties of matter. The course will empower him to apply his theoretical knowledge in various physical phenomena that occur in day to day life and he can use this scientific knowledge for the betterment of the society.</i>  |
| <b>PSO2</b>  | <i>Understanding of basic concepts related to Electricity and Magnetism .He should be proficient in designing and handling different electrical circuits</i>  |
| <b>PSO3</b>  | Expertise in different aspects of Thermal and Statistical Physics which serves as a basis for many physical systems used in industrial applications and deals with the physics and technology of Engines and Refrigerators.<br><i>Proficient in the field of Optics which will increase his demand in research and industrial establishments engaged in activities involving optical instruments.</i> |
| <b>PSO4</b>  | <i>Proficient in the field of Solid State Physics which will increase his demand in R &amp; D.</i>  |
| <b>PSO5</b>  | <i>Basic knowledge in the field of Modern physics and Quantum Mechanics which have utmost importance at both undergraduate and graduate level.</i>  |
| <b>PSO6</b>  | Comprehensive knowledge of Basic Electronics, Analog & Digital Principles and their Applications.<br>Learn the integrated approach to analog electronic circuitry and digital electronics for R&D.  |

| <b>Year wise Structure of B.Sc. in Physics<br/>(CORE / ELECTIVE COURSES &amp; PROJECTS)</b> |      |     |  |             |   |             |   |              |  |              |                              |              |                                      |            |

| <b>CERTIFICATE COURSE IN BASIC PHYSICS</b>  |  |   |
|---|--|---|
| <b>Programme:</b> <i>Certificate Course in Basic Physics</i>  |  | <b>Year: I</b>   <b>Semester: I</b><br><b>Paper-I</b> |
| <b>Subject: Physics</b>   |  |   |
| <b>Course Code:</b>   | <b>Course Title: Mechanics</b>   |   |
| <b>Course Outcomes</b>  |  |   |
| <ol style="list-style-type: none"> <li>1. Understanding of Vector Algebra and Vector Calculus.</li> <li>2. Understand the physical interpretation of gradient, divergence and curl.</li> <li>3. Study of gravitational field and potential and understanding of Kepler's laws of Planetary motion.</li> <li>4. Understanding of different frames of references and conservation laws.</li> <li>5. Understand the dynamics of rigid body and concept of moment of inertia. Study of moment of inertia of different bodies and its applications.</li> <li>6. Study the properties of matter, response of the classical systems to external forces and their elastic deformation and its applications.</li> <li>7. Comprehend the dynamics of Fluid and concept of viscosity and surface tension along with its applications.</li> </ol> |  |   |
| <b>Credits: 04</b>  |  | <b>Core Compulsory</b>                                |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal Assessment : 25</b>   |  | <b>Min. Passing Marks: 33</b>                         |
| <b>Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0</b>   |  |   |
| <b>Unit</b>   | <b>Topic</b>   | <b>No. of Lectures</b>                                |
| <b>Unit I</b>   | <b>Vectors Algebra</b><br>Vector algebra. Scalar and vector products, scalar and vector triple products, Derivative of a vector with respect to a parameter, Del operator, gradient, divergence and curl, Gauss divergence theorem, Stokes curl theorem and Green's theorem, Line, surface and volume integral of a vector function. | <b>10</b>   |
| <b>Unit II</b>  | <b>Gravitation field and potential</b><br>Gravitational field and potential, Gravitational potential energy, Gravitational field Intensity and potential due to a ring, a spherical shell, solid sphere and circular disc, gravitational self-energy, Inverse square law of forces, Kepler's laws of planetary motion.               | <b>10</b>   |

|                 |   |           |
|-----------------|---|-----------|
| <b>Unit III</b> | <b>Conservation Laws</b><br>Frames of reference, Concept of inertial and Non-inertial frames of references<br>Work energy theorem, Conservative and non-Conservative forces, Linear restoring force, Gradient of potential, Conservation of energy for the particle<br>Energy function, Concept of Centre of mass, Angular momentum and torque<br>Laws of conservation of total energy, total linear momentum and total angular momentum along with their examples. | <b>15</b> |
| <b>Unit IV</b>  | <b>Dynamics of rigid body and Moment of Inertia</b><br>Translatory and Rotatory motion, Equation of motion for Rotating rigid body,<br>angular momentum vector and moment of inertia, Theorem of parallel and<br>perpendicular axes, Moment of inertia of a cylinder, rod, lamina, ring, disc,<br>spherical shell, solid sphere, kinetic energy of rotation, rolling along a slope,<br>Application to compound pendulum.  | <b>10</b> |
| <b>Unit V</b>   | <b>Properties of Matter</b><br>Basic concept, Elastic constants and their Interrelations, torsion of cylinder,<br>bending of beam, bending moment, Cantilever, shape of Girders/ rail tracks,<br>Viscosity, Stokes's law, Poiseuille's formula, Equation of continuity,<br>Bernoulli's theorem, Surface tension and its molecular interpretation.   | <b>15</b> |

### **Suggested Reading**

- 1.R. Resnick and D. Hilliday : Physics Vol-I
- 2.Berkeley Physics Course : Mechanics Vol-I
- 3.R.P. Feynman, R.B.Lightan and M.Sand : The Feynman Lectures in Physics
- 4.D.S. Mathur : Mechanics
- 5.D.S. Mathur : Elements of Properties of Matter
6. Murray Spiegel, Seymour Lipschutz, Dennis Spellman, "Schaum's Outline Series: Vector Analysis", McGraw Hill, 2017.
7. J. C. Upadhaya: Mechanics, S. Chand

### **Suggested Online Link:**

1. MIT Open Learning - Massachusetts Institute of Technology, <https://openlearning.mit.edu/>
2. National Programme on Technology Enhanced Learning (NPTEL),  
<https://www.youtube.com/user/nptelhrd>
3. Swayam Prabha - DTH Channel,  
[https://www.swayamprabha.gov.in/index.php/program/current\\_he/8](https://www.swayamprabha.gov.in/index.php/program/current_he/8)

**This course can be opted as an elective by the students of following subjects:** The course can be opted as an elective, which is open to all students.

### **Suggested Continuous Evaluation (25 Marks):**

Continuous internal evaluation shall be based on allotted assignment and class tests. The marks shall be as follows:

**Class Test/Assignment/ attendance- (10+10+5)**

**Course Prerequisites:** Physics and Mathematics in 12<sup>th</sup>

| <b>CERTIFICATE COURSE IN BASIC PHYSICS</b>   |   |  |
|--|---|--|
| <b>Programme:</b> <i>Certificate Course in Basic Physics</i>   |   | <b>Year: I</b><br><b>Semester: I</b><br><b>Practical</b><br><b>(Lab)</b> |
| <b>Subject: Physics Practical (Lab)</b>  |   |  |
| <b>Course Code</b>   | <b>Course Title:</b> Mechanical Properties of Matter (Lab)  |  |
| <b>Course Outcomes:</b>  |   |  |
| 1. Experimental physics has the most striking impact on the industry wherever the instruments are used to study and determine the mechanical properties. |   |  |
| 2. Measurement precision and perfection is achieved through Lab Experiments.   |   |  |
| <b>Credits: 02</b>   |   | <b>Core Compulsory</b>   |
| <b>Max. Marks: 50</b><br><b>Internal (Record File): 15</b><br><b>External Practical Exam: 20</b><br><b>External Viva Voce : 15</b>                       |   | <b>Min. Passing Marks: 17</b>  |
| <b>Total No. of Lectures-Tutorials-Practical (in hours per week): 0-0-4</b>  |   |  |
| <b>Unit</b>  | <b>Topic</b>  | <b>No. of Lectures</b>   |
| <b>Lab Experiment List</b>   |   |  |
|  | <ol style="list-style-type: none"> <li>1. To study the Motion of Spring and calculate (a) Spring constant, (b) <math>g</math> and (c) Modulus of rigidity.</li> <li>2. To determine the Moment of Inertia of a Flywheel.</li> <li>3. To determine <math>g</math> and velocity for a freely falling body using Digital Timing Technique.</li> <li>4. To determine Coefficient of Viscosity of water by Capillary Flow Method (Poiseuille's method).</li> <li>5. To determine the Young's Modulus of a Wire by Optical Lever Method.</li> <li>6. To determine the Young's Modulus by bending of beam.</li> <li>7. To determine the Modulus of Rigidity of a Wire by Maxwell's needle. To determine the elastic Constants of a wire by Searle's method.</li> <li>8. To determine the value of <math>g</math> using Bar Pendulum.</li> <li>9. To determine the value of <math>g</math> using Kater's Pendulum.</li> <li>10. To determine Surface Tension.</li> <li>11. To determine the modulus of rigidity by Barton's Apparatus (Horizontal and Vertical)</li> <li>12. To determine the elastic constants by Searle's method</li> </ol> | <b>60</b>  |

**Suggested Readings:**

1. M. Yadav, Practical Physics, Vol 1, KedarNath Ramnath Publication, 2023.
2. B.L. Worsnop, H.T. Flint, “Advanced Practical Physics for Students”, Methuen & Co., Ltd., London, 1962.
3. S. Panigrahi, B. Mallick, “Engineering Practical Physics”, Cengage Learning India Pvt. Ltd., 2015.
4. S.L. Gupta, V. Kumar, “Practical Physics”, Pragati Prakashan, Meerut, 2014.

**Suggestive Digital Platforms / Web Links:**

1. Virtual Labs at Amrita Vishwa Vidyapeetham, <https://vlab.amrita.edu/?sub=1&brch=74>
2. Digital Platforms /Web Links of other virtual labs may be suggested / added to this lists by individual Universities

**Suggested Continuous Evaluation Methods:**

Continuous internal evaluation shall be based on attendance of student in Lab and presentation of practical in the record file. The marks shall be as follows

**Record File (15 marks)**

**PREREQUISITE:** Opted / Passed Semester I, Theory Paper-1

**Further Suggestions:**

- The institution may suggest a minimum number of experiments (say 6) to be performed by each student per semester from the Lab Experiment List.

| <b>Course Code:</b>  | <b>Course Title: Basic Instrumentation Skills-I</b>   |   |
| <b>Credits:</b> 03   |   | <b>Vocational/Minor (Experiments/hands on training)</b> |
| <b>Max. Marks:</b> 100<br><b>External Exam:</b> 75<br><b>Internal Assessment:</b> 25 |   | <b>Min. Passing Marks:</b> 33                           |
| <b>Total No. of Lectures-Tutorials-Practical (in hours per week):</b> 3-0-0          |   |   |
| <b>Unit</b>  | <b>Topic</b>  | <b>No. of Lectures</b>                                  |
| <b>Unit I</b>  | <b>Errors and Mechanical Tools:</b><br>Instruments accuracy, precision, sensitivity, resolution, range, least count of different instruments, Errors in measurements, Types of errors. Hand tools and their Uses: Identification, specifications, uses and maintenance of commonly used hand tools: Tweezers Screwdriver (Combination Set), Pliers, Wire Cutters, Wire Strippers, Crimping Tools, Sockets & Hex drivers, Clamps, Rotary Tools: Grinders, Portable Drill Machine, Small Hand Saws.   | <b>15</b>   |
| <b>Unit II</b>   | <b>Electrical &amp; Electronics Cables and Connector</b><br>Different type of electrical cables and their Specifications. Types of wires & cables, Standard wire gauge (SWG), Practice on different type of cable joint Testing phase , neutral and Earth by tester and multi-meter and test lamp.  | <b>10</b>   |
| <b>Unit III</b>  | <b>Domestic Wiring</b><br>Introduction and explanation of electrical wiring systems, cleat wiring, casino & Capping, house wiring, specification and types, rating & material, Demonstration & Practice on connecting common electrical accessories in circuits and testing them in series board., Testing & replacement of different types of fuses, switches, plug, sockets. Identification of different wiring materials and their specification, Removing of insulation from assorted wires and cable, Making a switch board with electrical accessories, Making Extension board. | <b>20</b>   |

**Suggested Continuous Evaluation (25Marks):**

Continuous internal evaluation shall be based on allotted assignment and class tests. The marks shall be as follows:

**Class Test/Assignment/ attendance- (10+10+5)**

| <b>CERTIFICATE COURSE IN BASIC PHYSICS</b>  |  |  |
|---|--|--|
| <b>Programme:</b> <i>Certificate Course in Basic Physics</i>  |  | <b>Year: I</b> <b>Semester: II</b><br><b>Paper-I</b> |
| <b>Subject: Physics</b>   |  |  |
| <b>Course Code:</b>   | <b>Course Title: Electricity and Magnetism</b>   |  |
| <b>Course Outcomes:</b>   |  |  |
| <p>1. Understanding of Electric Field and Potential. Evaluation of Electric Field and Potential for different types of charge distributions.</p> <p>2. Study of Electric and Magnetic Fields in matter. Understand the concept of polarizability, Magnetization and Electric Displacement Vector.</p> <p>3. Study of Steady and Varying electric currents.</p> <p>4. Understanding of different aspects of alternating currents and its applications.</p> <p>5. Understand the Magnetostatics, Lorentz Force and Energy stored in magnetic Field.</p> <p>6. Comprehend the different aspects of Electromagnetic induction and its applications.</p> |  |  |
| <b>Credits: 04</b>  |  | <b>Core Compulsory</b>                               |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal Assessment : 25</b>   |  | <b>Min. Passing Marks: 33</b>                        |

| <b>Unit</b>   | <b>Topic</b>   | <b>No. of Lectures</b>                               |
| <b>Unit I</b>   | <b>Electric field and potential</b><br>Coulomb law, Gauss' theory, its integral and differential forms, line integral of Electric field, Electric field and potential due to an arbitrary charge distribution. Electrostatic energy, energy stored in an Electric field. Electric field and potential due to long charged wire, Spherical shell, sphere, disc, dipole.   | <b>15</b>  |
| <b>Unit II</b>  | <b>Electric and Magnetic fields in Matter</b><br>Moments of charge distributions, Polar and non-polar molecule, polarization vector, electric displacement vector, three electric vectors, dielectric susceptibility and permittivity, polarizability, Clausius-Mossotti relation Magnetization, magnetic susceptibility, diamagnetic, paramagnetic and ferromagnetic substances, Hysteresis and B-H curve, Langevin's theories of Diamagnetism and paramagnetism, Weiss theory of ferromagnetism. | <b>15</b>  |
| <b>Unit III</b>   | <b>Electric Currents (Steady and Varying)</b><br>Current density, Equation of Continuity, Ohm's law and electrical conductivity, Lorentz Drude theory, Wiedmann-Frenz law, Kirchhoff's Laws and their applications, Transient current, Growth and decay of D. C. in L - R and L - C circuits, charging and discharging of a capacitor through a resistance   | <b>10</b>  |

|                |  |           |
|----------------|--|-----------|
| <b>Unit IV</b> | <b>Magnetostatics</b><br>Lorentz force, Bio-Savert's law, Ampere's law, Application of Biot-Savert law, magnetic field due steady current in a long straight wire, Interaction between two wires, field due a Helmholtz coil, solenoid and current loop, magnetic vector potential, permeability, Energy stored in Magnetic field.   | <b>10</b> |
| <b>Unit V</b>  | <b>Electromagnetic Induction and Alternating Current</b><br>Faraday's laws of induction, Lenz's law, Electromotive force, Measurement of magnetic field, Eddy current, Mutual inductance, Self-inductance. Impedance admittance and reactance, R-C, R-L and L-C circuits with alternating e.m.f. source, series and parallel L-C-R circuits, resonance and sharpness, Quality factor, Power in A. C. circuits, Choke coil. | <b>10</b> |

| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal Assessment: 25</b> | <b>Min. Passing Marks: 33</b> |

**Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0**

| Unit            | Topic   | No. of Lectures |
|-----------------|---|-----------------|
| <b>Unit I</b>   | <b>Analysis of wave motion</b><br>Characteristics, Differential equation of a wave motion, principle of superposition, Interference, Beats, stationary waves, Energy of stationary waves, Wave velocity and group velocity, Fourier theorem, Fourier analysis of square, triangular and saw-tooth waves. Energy density of plane acoustic waves, Acoustic intensity, Measurement of acoustic intensity – the dB scale Characteristics and loudness of Musical sound, Acoustic impedance Reflection and transmission of acoustic waves. Acoustics of buildings, reverberation time, Sabine’s formula, Principle of sonar system. | <b>15</b>       |
| <b>Unit II</b>  | <b>Ultrasonics</b><br>Classification of Sound waves, Ultrasonics, Quartz crystal and Piezo electric effect, Magnetostriction effect, Properties of Ultrasonic, Detection of ultrasonic waves, Determination of velocity of ultrasonic waves in liquid (Acoustic grating method) . Application of Ultrasonics.   | <b>15</b>       |
| <b>Unit III</b> | <b>Simple Harmonic Oscillations</b><br>Periodic motion, SHM in mechanical systems, Energy of Simple harmonic oscillator, Superposition of SHM(s), Oscillations of two masses connected by a spring, Non-linear (An-harmonic) oscillator and its applications to simple pendulum. Applications of Simple harmonic motion in compound pendulum Torsional pendulum and LC circuit, Composition of two SHM(s) of different frequency ratio, Lissajous’ figures for equal frequencies ratio and 2:1 frequencies ratio  | <b>15</b>       |
| <b>Unit IV</b>  | <b>Damped and Forced Harmonic Oscillations</b><br>Damping force, Different cases for over, critical and under damping, Mechanical damped harmonic oscillators, Logarithmic decrement, Power Dissipation, Relaxation time & Quality Factor.  | <b>15</b>       |

|  |  |  |
|--|--|--|
|  | Forced oscillations, Mechanical driven harmonic oscillators, Transient and steady state behavior, Power absorption, phenomenon of resonance, amplitude resonance, velocity resonance, sharpness of resonance/Fidelity, Bandwidth and quality factor. |  |
|--|--|--|

### **Suggested Reading**

1. R. Resnick and D. Halliday: Physics Vol-I
2. D. S. Mathur: Mechanics
3. Brijlal and Subrahmanyam: Waves and Oscillations
4. B.S. Semwal and M.S.Panwar : Wave Phenomena and MaterialScience
5. Berkeley Physics Course: Mechanics Vol-I
6. R. K. Ghose: The mathematics of waves an Vibrations
7. D. P. Khandelwal: Oscillations and Waves
8. I. I. Pain: Physics of Vibration
9. A. P. French: Vibrations and Waves

### **Suggested Online Link:**

1. MIT Open Learning - Massachusetts Institute of Technology, <https://openlearning.mit.edu/>
2. National Programme on Technology Enhanced Learning (NPTEL), <https://www.youtube.com/user/nptelhrd>
3. Swayam Prabha - DTH Channel, [https://www.swayamprabha.gov.in/index.php/program/current\\_he/8](https://www.swayamprabha.gov.in/index.php/program/current_he/8)

### **Suggested Continuous Evaluation (25 Marks):**

Continuous internal evaluation shall be based on allotted assignment and class tests. The marks shall be as follows:

**Class Test/Assignment/ attendance- (10+10+5)**

| <b>DIPLOMA IN APPLIED PHYSICS</b>   |  |                               |

| <b>Internal Assessment: 25</b>  |  |                               |
| <b>Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0</b>   |  |                               |
| <b>Unit</b>   | <b>Topic</b>   | <b>No. of Lectures-60</b>     |
| <b>Unit I</b>   | <b>Basic concepts and First law of thermodynamics</b><br>Thermodynamic Systems, Thermal equilibrium and Zeroth law of thermodynamics, Equation of state and First law of thermodynamics, Discussion of Heat and Work, Quasi-static Work; Reversible and Irreversible; Path Dependence; Heat Capacities Adiabatic Processes, Vander Wall equation, Distinction between Joule, Joule- Thompson and Adiabatic expansion of a gas.   | <b>10</b>                     |
| <b>Unit II</b>  | <b>Second law of Thermodynamics and Entropy</b><br>Insufficiency of first law of thermodynamics, Condition of Reversibility, Carnot's Engine and Carnot's Cycle, Second law of thermodynamics, Carnot's Theorem, Thermodynamic scale of temperature and its identity to perfect gas, scale of temperature. Entropy, Mathematical formulation of Second law of thermodynamics, Entropy of an ideal gas, T-S diagram and its applications, Evaluation of Entropy changes in simple cases, Third law of thermodynamics. | <b>10</b>                     |
| <b>Unit III</b>   | <b>Thermodynamic Relations</b><br>Thermodynamic potentials, Maxwell's equation from thermodynamic potentials, Some useful manipulations with partial derivatives (cooling in adiabatic processes and Adiabatic stretching of a wire), The Clausius-Clapeyron's equations, Triple point, Applications of Maxwell's thermo   | <b>10</b>                     |

|                |  |           |
|----------------|--|-----------|
|                | dynamical relations.   |           |
| <b>Unit IV</b> | <b>Transport of Heat and Kinetic theory of Gases</b><br>Black body radiation, Thermodynamics of radiations inside a hollow enclosure, Kirchoff's Laws, Derivation of Stefan Boltzmann Law, Wien's displacement law, Black body spectrum formulae early attempts, Raleigh Jean's Law, Quantum theory of Radiation, Planck's formula for black body spectrum, Wien's law, Radiation as a photon gas. Degree of Freedom Law of Equipartition of Energy, Distributive law of velocities, Most Probable speed, Average and root mean square velocities.             | <b>15</b> |
| <b>Unit V</b>  | <b>Fundamentals of Statistical Mechanics:</b> Probability and thermodynamic probability, postulates of statistical mechanics, macrostates and microstates, equilibrium and fluctuation constraints, ensemble and average properties, phase space, $\mu$ -space and gamma space, division of phase space into cells, Micro canonical, canonical and grand canonical ensembles, Entropy and probability, interpretation of second law of thermodynamics, Boltzmann canonical distribution law. Classical and Quantum statistics, Comparison of three statistics. | <b>15</b> |

### **Suggested Reading**

**Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0**

| <b>Unit</b>     | <b>Topic</b>   | <b>No. of Lectures</b> |
|-----------------|--|------------------------|
| <b>Unit I</b>   | Semiconductors- P- type, n-type, Semiconductor materials, pn diode, Depletion region, Working of pn diode, characteristics, Diode as a rectifier, Transistors PNP and NPN and their working. | <b>15</b>              |
| <b>Unit II</b>  | OPTICS- Mirrors and lenses, image formation, lens formula, Ramsden and Huygens eyepieces.  | <b>10</b>              |
| <b>Unit III</b> | Newton's first and Second Law, Concept of force and mass, Some particular forces, Newton's third law, Friction, Properties of friction.  | <b>10</b>              |
| <b>Unit IV</b>  | Rectilinear motion, laws of motion, Work and energy, conservation of energy, law of gravitation and Kepler's law (not derivation).   | <b>10</b>              |
| <b>Unit V</b>   | Thermodynamics systems, Thermal equilibrium, Zeroth law, work done, first law of thermodynamics, Internal energy, enthalpy.  | <b>15</b>              |

**Suggested Reading:**

- 1- Physics: Resnick and Halliday, John Wiley, New York.
- 2- Mechanics: D S Mathur, S Chand & company.
- 3- Semiconductor materials and devices, M S Tyagi, John Wiley, New York.
- 4- Basic Electronics: B L Theraja, S Chand & company.

|---|--|-----------------|
| Unit  | Topic  | No. of Lectures |
| <b>Unit I</b>   | <b>Quantum Mechanics and Bohr Atom Model</b><br>Planck's quantum, Planck's constant and light as a collection of photons; Photoelectric effect and Compton scattering. De Broglie wavelength and matter waves; Davisson-Germer experiment. Rutherford model, Bohr's model, quantization rule and atomic stability; calculation of energy levels for hydrogen like atoms and their spectra.   | <b>15</b>       |
| <b>Unit II</b>  | <b>Quantum Systems and Heisenberg Uncertainty Principle</b><br>Position measurement; Wave-particle duality, Heisenberg uncertainty principle- impossibility of a particle following a trajectory; Estimating minimum energy of a confined particle using uncertainty principle; Energy-time uncertainty principle.   | <b>15</b>       |
| <b>Unit III</b>   | <b>Matter Waves and Schrödinger Equation</b><br>Two slit interference experiment with photons, atoms & particles; linear superposition principle as a consequence; Matter waves and wave amplitude; Schrodinger equation for non-relativistic particles; Momentum and Energy operators; stationary states; physical interpretation of wavefunction, probabilities and normalization; Probability and probability current densities in one dimension. | <b>15</b>       |
| <b>Unit IV</b>  | <b>Motion in a Potential Well</b><br>One dimensional infinitely rigid box- energy eigenvalues and eigenfunctions, normalization; Quantum dot as an example; Quantum mechanical tunnelling in one dimension - across a step potential and across a rectangular potential barrier.   | <b>15</b>       |

**This course can be opted as an elective by the students of following subjects:** The course can be opted as an elective, which is open to all students.

### Suggested Continuous Evaluation (25Marks):

Continuous internal evaluation shall be based on allotted assignment and class tests. The marks shall be as follows:

**Class Test/Assignment/ attendance- (10+10+5)**

**CoursePrerequisites:** Passed Semester IV.

**\*\*Elective (04 Credit, one from the list EL3) To be opted in Semester VIII**

1. **Statistical Physics**
2. **Bio Physics**
3. **Medical Physics**
4. **Atmospheric Physics**
5. **Nano Materials and Applications**

**Subject prerequisites:  
Bachelor in Science with Physics as major subject.**

**Programme Outcomes (POs):**

Students having Degree in *Bachelor (Research in Physics)* should have knowledge of advanced concepts of Physics and ability to apply this knowledge in various fields of academics, research and industry. They may pursue their future career in the field of academics, research and industry.

|     |  |
|-----|--|
| PO1 | Competence in the methods and techniques of calculations using Mathematical Physics, Classical Mechanics, Quantum Mechanics and Communication Electronics. It will develop an analytical skill on an advanced level and will enable the student to have mathematical tools to solve complex problems of Physics. The Programme will motivate the student to know more about the matter, the universe and the recent developments in the field of science. The student will have adequate knowledge to work for the industry,, consultancy, education, and research |
| PO2 | The students would gain substantial knowledge in various branches of physics. The programme will enable the student to explore more in the field of his/her choice like Advanced Electronics, Spectroscopy, Astrophysics and High energy Physics. The student will be well equipped with the knowledge required for different organizations, industry, R& D sector.  |

**Programme specific outcomes (PSOs):**

**PG I<sup>ST</sup> YEAR/ Bachelor (Research in Physics)**

**Bachelor (Research in Physics )** programme provides the student the adequate knowledge, general competence, and analytical skills on an advanced level, needed in industry, consultancy, education, research, or in government organisation.

**Programme specific outcomes (PSOs):**

**PG II<sup>ND</sup> YEAR/ Master in Physics**

- The Master of Science in Physics programme provides student the adequate knowledge to use mathematical tools to solve complex physical problems and have the solid background and experience needed to analyze and solve advanced problems in physics.
- This course would enable the student to acquire scientific skills and the practical knowledge by performing experiments in general physics and electronics.
- The student would also get some research oriented experience by doing theoretical and experimental projects in the last semester under the supervision of faculty.
- The course as a whole opens up several career doors for the students interested in various areas of science and technology in private, public and government sectors. Students may get job opportunities in higher education, research organizations, physics consultancy and many others. Some of the institutions where physics students can start their career are: BARC, DRDO, NPTC, IISc, ISRO, ONGC, BHEL, PRL, NPL, SINP, VECC, IITs, NITs, IIPR etc.

## Year wise Structure of PG in Physics (Core and Elective Courses a

| <b>UNIT</b>  | <b>TOPIC</b>   | <b>No. of Lectures</b>        |
| <b>UNIT I</b>  | Mechanics of a System of Particles Constraints and generalized coordinates, D Alembert's principle, Lagrange equations for holonomic and non holonomic systems and their applications, conservation laws of linear momentum, energy and angular momentum.  | <b>15</b>                     |
| <b>UNIT II</b>   | Hamiltonian Formulation and Hamilton Jacobi Theory Hamiltonian equations of motion and their physical significance, Hamilton's principle, principle of least action, canonical transformations Hamilton-Jacobi theory, Poisson brackets, properties of Poisson bracket, Poisson's Theorem, Lagrange bracket. | <b>15</b>                     |
| <b>UNIT III</b>  | Dynamics of a Rigid Bodies Motion of a rigid body, body and space Reference system, angular momentum and Inertia tensor, Principle axes- Principle moments of Inertia, spinning tops, Euler angles, Infinitesimal rotations.   | <b>15</b>                     |
| <b>UNIT IV</b>   | Central Force Problem Action and angle variables, phase integral, small oscillations, Kepler's laws of Planetary motion and their deduction, scattering in a Central field, Rutherford scattering cross section  | <b>15</b>                     |

| <b>BACHELOR (RESEARCH IN PHYSICS)</b>  |   |                               |
|--|---|-------------------------------|
| Programme: BACHELOR (RESEARCH IN PHYSICS)  | YEAR IV   | SEMESTER<br>VII/PAPER<br>III  |
| <b>Subject: Physics</b>  |   |                               |
| Course code.....   | Course Title: <b>Quantum Mechanics</b>  |                               |
| Course Outcomes:   |   |                               |
| <p>The course provides an understanding of the behaviour of the systems at microscopic (atomic and nuclear) scale and even smaller. Students would learn basic postulates and formulations of quantum Mechanics. The course, in fact, plays an important role in explaining the behaviour of all physical systems in the universe. The course includes the study of a brief review of foundations of quantum mechanics, matrix formulation of quantum mechanics, symmetry in quantum mechanics and approximation methods for bound states.</p> |   |                               |
| Credits: 4   |   | Core<br>Compulsory            |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   |   | <b>Min. Passing Marks: 36</b> |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |   |                               |
|  |   |                               |
| <b>UNIT</b>  | <b>TOPIC</b>  | <b>No. of Lectures</b>        |
| <b>UNIT I</b>  | <b>Non-Relativistic Quantum Mechanics and Schrödinger Equation</b><br>Schrödinger's equation, Probability and current densities, continuity equation, physical interpretation of wave function, orthogonality of eigen functions, Principle of superposition, wave packet, normalization, Schrödinger's equation in three dimensions, centrally symmetric square well and harmonic potentials, harmonic oscillator and its wave functions, Hydrogen atom. | <b>15</b>                     |
| <b>UNIT II</b>   | <b>Operator Formulation of Quantum Mechanics</b><br>State vectors and operators in Hilbert Space, Eigen values and Eigen vectors of an operator, Hermitian, Unitary and Projection operators, commuting operators, BRA and KET Notations, Postulates of Quantum Mechanics, co-ordinate Momentum and Energy representations, dynamical behavior, Heisenberg, Schrödinger and interaction Pictures  | <b>15</b>                     |
| <b>UNIT III</b>  | <b>Theory of Angular Momentum</b><br>Orbital Angular momentum operator, its eigen value and eigen functions, space quantization, spin angular momentum, Pauli's theory of spin, Addition of angular momentum, ClebschGordan coefficients  | <b>15</b>                     |
| <b>UNIT IV</b>   | <b>Approximation Methods</b><br>Time independent and Time dependent Perturbation Theory Stationary Perturbation, first and second order   | <b>15</b>                     |

|  |  |  |
|--|--|--|
|  | <p>corrections, WKB approximation methods, connection formula and boundary conditions, Bohr Sommerfield quantization rule, Penetration of potential barrier, Time independent perturbation theory and its applications. Applications of time-dependent perturbation theory for constant perturbation, Fermi Golden rule, Coulomb excitation, Sudden and adiabatic approximation.</p> |  |

| <b>UNIT I</b>   | The universe and Solar System: Basic idea of universe and galaxies, Astronomical telescopes. The solar system. Classification of the Planets, Orbits, Laws of planetary motion. Physical features, surface features, Internal Structure. Atmosphere, Satellites and Rings. Asteroids, Meteors and Meteorites their types, Orbits: physical nature and composition. Origin of the minor planets, Observation of meteor showers and sporadic meteors Meteorite craters. Origin of Comets, Periodic comets, Physical nature, Spectra, Brightness variation. Gas production rates, dust and ion tails.  | <b>15</b>                     |
| <b>UNIT II</b>  | Stellar System: Sun as a Star: History of Sun, Sun's interior, the photosphere, the solar atmosphere (chromosphere & corona). Salient features of sunspots, sun's rotation & solar magnetic field, explanation for observed features of sunspots. Distances of stars from the trigonometric. Secular and moving cluster parallaxes. Stellar motions, Magnitude scale and magnitude systems. Atmospheric extinction. Absolute magnitudes and distance modulus. color index. The Hertzsberg- Russell Diagram: The colour, Brightness or luminosity, the population of star. Elementary idea of Binary & Variable Stars. Nuclear fission, Nuclear fusion, condition for nuclear reaction in stars. Types of galaxies, Structure and features of the Milky Way Galaxy | <b>15</b>                     |

|                 |  |           |
|-----------------|--|-----------|
| <b>UNIT III</b> | Physics of the Stars: Apparent and Mean Position of stars. Effects of atmospheric refraction, aberration, parallax, precession, nutation and proper motion on the coordinates of stars. Reduction from apparent to mean places and vice versa. Spectra of Stars. Distribution of stars in space. Statistical parallaxes. Local standard of rest. Solar motion and its determination. Peculiar velocities. Single and Two-star stream hypothesis. Velocity ellipsoid. Comparison with solar neighbourhood. Bottlinger's diagram. HR diagram. HD and MK spectral classification of stellar spectra. Radiation laws and basic ideas on spectral line formation. Explanation of stellar spectra in terms of Boltzmann and Saha equations. Spectroscopic parallax | <b>15</b> |
| <b>UNIT IV</b>  | Fundamental Equations: Equation of mass distribution. Equation of hydrostatic equilibrium. Equation of energy transport by radiative and convective processes. Equation of thermal equilibrium. Equation of state. Stellar opacity. Stellar energy sources. Stellar models: The overall problem and boundary conditions. Russell- Voigt theorem. Dimensional discussions of mass-luminosity law. Polytropic configurations. Homology transformations.  | <b>15</b> |

| <b>BACHELOR (RESEARCH IN PHYSICS)</b>  |  |                               |
|--|--|-------------------------------|
| Programme: BACHELOR (RESEARCH IN PHYSICS)  | YEAR IV  | SEMESTER VIII/PAPER III b     |
| <b>Subject: Physics</b>  |  |                               |
| Course code  | Course Title: <b>Elementary Particle Physics</b>   |                               |
| Course Outcomes  |  |                               |
| The course is important for the students to learn about the most fundamental building blocks of matter and radiation, interaction among elementary particles and hence to understand their behaviour. The course provides a platform for the students seeking research opportunities in high energy physics. |  |                               |
| Credits: 4   |  | Core Compulsory               |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   |  | <b>Min. Passing Marks: 36</b> |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |  |                               |
|  |  |                               |
| <b>UNIT</b>  | <b>TOPIC</b>   | <b>No. of Lectures</b>        |
| <b>UNIT I</b>  | Elementary Particles History of elementary particles, Classification of elementary particles, Fundamental interactions, Resonances, Lepton and Baryon number; Isospin, Strangeness, Hypercharge, Gell - Mann Nishijima relations, Symmetries and conservation laws, Parity, Time reversal and charge conjugation, Parity violation, CP violation in mesons, CPT invariance.  | <b>15</b>                     |
| <b>UNIT II</b>   | Unitary Symmetries and Application in the Physics of Elementary Particles Basics of unitary groups, fundamental representation of SU(2), SU(3) diagonal generators and weights, generators of SU(2) and U(2), weight diagram of fundamental representation of SU(2), generators of SU(3) and U(3), Weight of first fundamental representation of SU(3), shift operators, I, U, V spins, complete weight diagram for the (1 0), (0 1), (3, 0), (1 1) and (2 1) representations of SU(3) , Gell Mann Okubo Mass formula. | <b>15</b>                     |
| <b>UNIT III</b>  | Method of Young Tableaux and its Applications Young Tableaux and unitary symmetry, standard arrangements of young tableaux, Dimentiaonality of the representations of SU(N), Multiplets of SU(N-1), subgroup of SU(N), Baryon multiplets in different representations, general rule and its application for reducing kronecker product of two representations, kronecker product of three particle state vectors.  | <b>15</b>                     |
| <b>UNIT IV</b>   | Nuclear and Particle Detectors Basic principle of particle   | <b>15</b>                     |

|   |  |  |
|---|--|--|
|   | detectors, Ionization chamber, Proportional counter, Geiger-Muller Counter, Scintillation counters and-ray spectrometer, semiconductor detector, Nuclear emulsion technique, Cloud chamber, Bubble chamber |  |

| <b>BACHELOR (RESEARCH IN PHYSICS)</b>  |   |                               |
|--|---|-------------------------------|
| Programme: BACHELOR (RESEARCH IN PHYSICS)  | YEAR IV   | SEMESTER VIII/PAPER IV        |
| <b>Subject: Physics</b>  |   |                               |
| Course code  | Course Title: <b>Condensed Matter Physics</b>   |                               |
| Course Outcomes:   |   |                               |
| The students will be able to develop an understanding of the lattice, different types of crystal structures, symmetries. The student would gain insight about the interior of the substances using X-ray diffraction in crystals. This course also includes elastic waves, phonons, and lattice vibrational properties and also superconductivity. The course forms a theoretical basis of experimental material science and technology. |   |                               |
| Credits: 4   |   | Core Compulsory               |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   |   | <b>Min. Passing Marks: 36</b> |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |   |                               |
|  |   |                               |
| <b>UNIT</b>  | <b>TOPIC</b>  | <b>No. of Lectures</b>        |
| <b>UNIT I</b>  | <b>Symmetry and Reciprocal Lattice:</b><br>Crystal symmetry elements, Miller indices, Direct lattice type, fundamental type of direct lattices i.e. 2 dimensional and 3 dimensional lattice, Diffraction of Waves by Crystal: The Bragg law, Fourier Analysis, Reciprocal lattice Vectors, Diffraction Condition. Brillouin Zones, Reciprocal lattice (example of sc, bcc, fcc, hcp lattices), Crystal structure factor (bcc, fcc), Atomic form factor, Scattering factors, Intensity of diffraction maxima, extinction due to lattice centering. | <b>15</b>                     |
| <b>UNIT II</b>   | <b>Lattice Vibrations:</b><br>Concept of dispersion relation, quantization of lattice vibrations (Phonons), normal modes & normal coordinates, longitudinal and transverse modes of vibration, modes of vibration of monatomic and diatomic lattices. Density of states (Phonons).  | <b>15</b>                     |
| <b>UNIT III</b>  | <b>Free Electron theory of metals:</b><br>Free electron theory of metals, free electron gas in one dimensional box, free electron gas in three dimensional box-filling up of energy bands, Density of electron states, Fermi energy, Average kinetic energy of electron , average velocity.   | <b>15</b>                     |
| <b>UNIT IV</b>   | <b>Thermal properties of solids:</b><br>Specific heat of solids, Classical theory, Einstein theory, The Debye theory, Born's modification of the Debye theory. Heat capacity of diatomic lattices. Thermal conductivity. Lattice thermal conductivity. Phonon mean free path. Phonon-phonon scattering-the umklapp processes. Thermal Expansion. Origin of thermal expansion. Gruneisen relation  | <b>15</b>                     |

|  |  |

| <b>BACHELOR (RESEARCH IN PHYSICS)</b>  |   |                               |
|--|---|-------------------------------|
| Programme: BACHELOR (RESEARCH IN PHYSICS)  | YEAR IV   | SEMESTER VIII<br>EL3(3)       |
| <b>Subject: Physics</b>  |   |                               |
| Course code  | Course Title: <b>Medical Physics</b>  |                               |
| Course Outcomes:   |   |                               |
| <p>Medical Physics is a branch of science that uses the methods of physics to study biological processes and also working of the instruments and machines used in Medical Science .Physics uses mathematical laws to explain the natural world, and it can be applied to biological organisms and systems to gain insight into their workings. The course includes Physics of Respiratory and Cardiovascular System, Electricity in the Body and Sound/Light and also Equipment's and Modern Medicines .The course opens future prospects of the student in the field of Medical Science .</p> |   |                               |
| Credits: 4   |   | Elective                      |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   |   | <b>Min. Passing Marks: 36</b> |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |   |                               |
| <b>UNIT</b>  | <b>TOPIC</b>  | <b>No. of Lectures</b>        |
| <b>UNIT I</b>  | <b>Mechanics of Human Body</b><br>Static, Dynamic and Frictional forces in the Body, Composition, properties and functions of Bone, Heat and Temperature, Temperature scales, Clinical thermometer, Thermography, Heat therapy, Cryogenics in medicine, Heat losses from Body, Pressure in the Body, Pressure in skull, Eye and Urinary Bladder.  | <b>15</b>                     |
| <b>UNIT II</b>   | <b>Physics of Respiratory and Cardiovascular System</b><br>Body as a machine, Airways, Blood and Lungs interactions, Measurement of Lung volume, Structure and Physics of Alveoli, breathing mechanism, Airway resistance, Components and functions of Cardiovascular systems, work done by Heart, Components and flow of Blood, Laminar and Turbulent flow, blood Pressure, direct and indirect method of measuring, Heart sounds.   | <b>15</b>                     |
| <b>UNIT III</b>  | <b>Electricity in the Body and Sound/Light In Medicine</b><br>Nervous system and Neuron, Electrical potentials of Nerves, Electric signals from Muscles, Eye and Heart, Block diagram and working to record EMG, Normal ECG wave form, Electrodes for ECG, Amplifier and Recording device, Block diagram and working to record ECG, Patient monitoring, Pace maker. General properties of sound, Stethoscope, Generation, detection and characteristics of Ultrasound, Ultrasound imaging technique, A scan and B scan methods of ultrasound imaging, | <b>15</b>                     |

|  |   |           |
|--|---|-----------|
|  | properties of light, Applications of visible UV, IR light, and Lasers in medicine, Microscope, Eye as an optical system, Elements of the Eye, Ophthalmology Instruments.  |           |
| <b>UNIT IV</b>   | <b>Diagnostic X-Rays and Nuclear Medicine</b><br>Production and properties of X-rays, Basic Diagnostic X-ray Machine, X-ray image, Live X-ray image, X-ray computed Tomography, Characteristics of Radio activity, Radioisotopes and Radio nuclides, Radioactivity sources for Nuclear medicine, Basic Instrumentation and clinical applications, Principles of Radiation Therapy, Nuclear medicine imaging devices, Radiation sources. | <b>15</b> |
| <b>Suggested Readings:</b>   |   |           |
| <p>Medical Physics by Department of Physics, St. Joseph's College, Trichy-2.</p> <p>Medical Physics by John R. Cameron and James G. Skofronick, John Wiley &amp; Sons.</p> <p>Hand book of Biomedical Instrumentation : R.S.Khandpur, Tata McGraw Hill Publication Co., Delhi, 1987.</p>   |   |           |
| <b>Can be opted by</b>   |   |           |
| <b>Bachelor in Science with Physics as major subject</b>   |   |           |
| <b>Suggested Continuous Evaluation Methods:</b>  |   |           |
| <b>Course Prerequisites</b>  |   |           |
| <b>Passed Semester VII with Physics as major</b>   |   |           |
| <b>Suggested Equivalent Online Courses:</b>  |   |           |

| <b>BACHELOR (RESEARCH IN PHYSICS)</b>  |  |                               |
|--|--|-------------------------------|
| Programme: BACHELOR (RESEARCH IN PHYSICS)  | YEAR IV  | SEMESTER VIII<br>L3(4)        |
| <b>Subject: Physics</b>  |  |                               |
| Course code  | Course Title: <b>Atmospheric Physics</b>   |                               |
| Course Outcomes:   |  |                               |
| The course introduces students to Earth- Atmosphere and Meteorology The course includes Environmental pollution and climate change etc. The course is useful for the students who want to work in Metereological department or wants to pursue his/her career in the field of environmental science . The course is also very important for R& D purposes. |  |                               |
| Credits: 4   |  | Elective                      |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   |  | <b>Min. Passing Marks: 33</b> |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |  |                               |
|  |  |                               |
| <b>UNIT</b>  | <b>TOPIC</b>   | <b>No. of Lectures</b>        |
| <b>UNIT I</b>  | <b>Introduction to Earth Atmosphere and Meteorology</b><br>Elementary concept of atmospheric sciences, atmosphere and its composition, Thermal and pressure variation in earth atmosphere, Thermal structure of the troposphere, stratosphere, mesosphere and ionosphere, Hydrostatic equation, spectral distribution of the solar radiation, Green house effect and effective temperature of earth. Meteorological process and different system, local winds, monsoons, fogs, clouds, precipitation, Cyclones and anti-cyclones, thunderstorms, Mountain Meteorology  | <b>15</b>                     |
| <b>UNIT II</b>   | <b>Atmospheric Dynamics and Thermodynamics</b><br>Introduction to atmospheric dynamics, Basic conservation laws, Applications of the basic equations, circulations and vorticity, Atmospheric oscillations, The general circulations, Tropical dynamics, Thermodynamical considerations, Adiabatic and isothermal processes, equation of state for dry and moist air, Humidity parameters, laws of thermodynamics, Entropy, Thermodynamic diagram and their uses.  | <b>15</b>                     |
| <b>UNIT III</b>  | <b>Environmental pollution and climate change</b><br>Atmospheric pollution, type of pollutants, various sources of emissions, Trace gases, Production and loss processes of stratosphere ozone, Tropospheric ozone, Role of trace gases and their budget, motion of air-masses (back-air trajectory), tools for modeling (Box model and 3-D model), Atmospheric aerosols, classification and properties, concentration and size distribution, Absorption and scattering of radiation, optical phenomena in atmospheric, Modeling for aerosols, Estimations of radiative forcing. Definition of climate long term changes, possible causes of climate change-External and internal, General idea of internal dynamical processes of the atmosphere, climate modeling, Review of various climate models. | <b>15</b>                     |

|   |   |           |
|---|---|-----------|
| <b>UNIT IV</b>  | <b>Instrumentation and Observational Techniques</b><br>Convectional measurements of pressure, temperature, humidity, wind speed and direction, sunshine duration, radiation clouds, upper air pressure, temperature, humidity and wind measurements, Polit balloons, radiosonde, dropsonde, ozonesonde, GPS sonde. Application of radars to study the atmospheric phenomenon, LIDAR, SONAR, RASS (Radio-acoustic sounding system), Observational technique for aerosol. | <b>15</b> |

| <b>Subject: Physics</b>  |  |                        |
| Course code  | Course Title: <b>Nano Materials and Applications</b>   |                        |
| Course Outcomes:   |  |                        |
| This course introduces the essence of nano materials, their synthesis, and characterization. On successful completion of the module students should also be able to understand the optical properties and electron transport phenomenon in nanostructures. It also covers few important applications of nano materials used in this technological era. |  |                        |
| Credits: 4   | Elective   |                        |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   | <b>Min. Passing Marks: 33</b>  |                        |

|  |  |                        |
| UNIT   | TOPIC  | No. of Lectures        |
| <b>UNIT I</b>  | <b>Nanoscale Systems</b><br>Density of states (1-D,2-D,3-D). Length scales in physics, Nanostructures: 1D, 2D and 3D nanostructures (nanodots, thin films, nanowires, nanorods), Band structure and density of states of materials at nanoscale, Size Effects in nano systems, Applications of Schrodinger equation- Infinite potential well, potential step, potential box, quantum confinement of carriers in 3D, 2D, 1D nanostructures and its consequences.  | <b>15</b>              |
| <b>UNIT II</b>   | <b>Synthesis of Nanostructure Materials</b><br>Metals, Metal Oxide, Carbon based nanomaterials CNT, C60, graphene. Top down and Bottom up approach, Photolithography. Ball milling. Gas phase condensation. Vacuum deposition. Physical vapor deposition (PVD): Thermal evaporation, Chemical vapor deposition (CVD).Sol-Gel. Spray pyrolysis. Hydrothermal synthesis. Preparation through colloidal methods. MBE growth of quantum dots. X-Ray Diffraction. Optical Microscopy. Scanning Electron Microscopy. Transmission Electron Microscopy. Atomic Force Microscopy. Scanning Tunneling Microscopy. | <b>15</b>              |
| <b>UNIT III</b>  | <b>Optical Properties</b><br>Concept of dielectric constant for nanostructures and charging of nanostructure. Quasi-particles and excitons. Excitons in direct and indirect band gap semiconductor nanocrystals. Quantitative treatment of quasi-particles and   | <b>15</b>              |

|   |  |           |
|---|--|-----------|
|   | excitons, charging effects. Radiative processes: General formalization-absorption, emission and luminescence. Optical properties of heterostructures and nanostructures.   |           |
| <b>UNIT IV</b>  | <p><b>Electron Transport and Applications of Nanoparticles</b><br/>Carrier transport in nanostructures. Coulomb blockade effect, thermionic emission, tunneling and hopping conductivity. Defects and impurities: Deep level and surface defects.</p> <p><b>Applications:</b> Applications of nanoparticles, quantum dots, nanowires and thin films for photonic devices (LED, solar cells). Single electron transfer devices (no derivation). CNT based transistors. Nanomaterial Devices: Quantum dots heterostructure lasers, optical switching and optical data storage. Magnetic quantum well; magnetic dots -magnetic data storage. Micro Electromechanical Systems (MEMS), Nano Electromechanical Systems (NEMS).</p> | <b>15</b> |

| <b>MASTER IN PHYSICS</b>  |  |                               |
|---|--|-------------------------------|
| Programme: <b>MASTER IN PHYSICS</b>   | YEAR V   | SEMESTER IX<br>PAPER I        |
| <b>Subject: Physics</b>   |  |                               |
| Course code   | Course Title: <b>Advanced Quantum Mechanics</b>  |                               |
| Course Outcomes:  |  |                               |
| <p>The course includes the study of scattering theory, identical particles, relativistic wave equations and quantization of wave fields. The course would describe the nature and behaviour of matter and energy at subatomic level. In particular, theory of scattering gives an understanding collision between a quantum mechanical particle and target. The study of relativistic quantum mechanics enables the students to understand the behaviour of objects moving with speeds comparable to that of light. The knowledge of this field forms the foundation for pursuing research in Quantum Field Theory and High Energy physics.</p> |  |                               |
| Credits: 4  |  | Core Compulsory               |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>  |  | <b>Min. Passing Marks: 36</b> |

| <b>UNIT</b>   | <b>TOPIC</b>   | <b>No. of Lectures</b>        |
| <b>UNIT I</b>   | <b>Free particle Dirac equation</b><br>Discrepancies faced by Schrödinger equations, Klein-Gordon equation and its drawbacks, Dirac's equation for a free particle, Dirac matrices, covariant form of Dirac equation, Probability and current densities, Free particle solutions of Dirac equation, Non conservation of Orbital Angular momentum and idea of spin, Interpretation of negative energy and hole theory         | <b>15</b>                     |
| <b>UNIT II</b>  | <b>Dirac particle in Electromagnetic Fields</b><br>Dirac equation in electromagnetic fields, Magnetic moment of charged particle, Gauge invariance of Dirac equation in electromagnetic fields, Non- relativistic correspondence of Dirac equation; Pauli equation, Adjoint spinors, Symmetries of Dirac Equation: Parity, Time reversal and Charge Conjugation; Lorentz covariance of Dirac Equation, , Bilinear covariants | <b>15</b>                     |
| <b>UNIT III</b>   | <b>Identical Particles and Quantum Field Theory</b><br>Identical particles, exchange degeneracy, symmetric and anti symmetric functions for many particle system Classical Fields, Schwinger's action principle, Lagrangian and Hamiltonian densities, Field equation, quantum structure of free fields and the particle concept,  | <b>15</b>                     |

|   |   |           |
|---|---|-----------|
|   | Quantization relations, Quantization of non relativistic Schrödinger matter field, System of identical bosons and fermions, Commutation and anti-commutation relations, Occupation number representation, creation and annihilation operators.  |           |
| <b>UNIT IV</b>  | <b>Quantum Theory of Scattering</b><br>Scattering Theory, Scattering cross section, method of partial wave analysis, phase shift, Optical theorem, scattering length, effective range theory; low energy scattering, Resonance, scattering from a square potential well and a rigid sphere, Born approximation, Validity of Born approximation, Born approximation through time dependent perturbation, its application to square well potential. | <b>15</b> |

| <b>UNIT</b>   | <b>TOPIC</b>  | <b>No. of Lectures</b>            |
| <b>UNIT I</b>   | <b>Roots of Algebraic and Transcendental Equations:</b><br>Element of computational techniques: roots of functions, Interpolation, Extrapolation, One point and two-point iterative methods such as bisection method and Newton Raphson methods.  | <b>12</b>                         |
| <b>UNIT II</b>  | <b>Integration and Differential:</b><br>Integration by Trapezoidal and Simpson's rule, Solution of first order differential equation using Runge-Kutta methods, Finite difference methods. Data Interpretation and Error analysis: Dimensional analysis, Precision and accuracy, error analysis, Propagation and errors.  | <b>15</b>                         |
| <b>UNIT III</b>   | <b>Least square fitting:</b><br>Least square fitting, Linear and nonlinear curve fitting, Chi square test. Random numbers: Introduction to random numbers, Monte Carlo method for random number generation. Probability Theory: Elementary probability theory, Random variables, Binomial, poisson and normal distributions, Central limit theorem.   | <b>15</b>                         |
| <b>UNIT IV</b>  | <b>Materials Modelling through VASP and SIESTA:</b><br>Basis Sets: plane waves versus numerical atomic orbitals basis sets, Pseudopotentials: ultrasoft versus norm conserving pseudopotentials. Numerical solutions of Kohn-Sham equations, Diagonalization procedure, SCF cycles and mixing scheme, Smearing: Gaussian, Fermi and Methfessel-Paxton smearing. SIESTA and VASP package to perform: electronic structure calculations, relaxation of atomic positions and unit cell parameters. Structural properties: equilibrium lattice constant, cohesive energy, bulk modulus. | <b>18</b>                         |

| <b>MASTER IN PHYSICS</b>   |   |                                   |
|--|---|-----------------------------------|
| Programme: <b>MASTER IN PHYSICS</b>  | YEAR V  | SEMESTER IX<br>PAPER II b         |
| <b>Subject: Physics</b>  |   |                                   |
| Course code  | Course Title: <b>Plasma Physics</b>   |                                   |
| Course Outcomes:   |   |                                   |
| The course includes Magneto Hydrodynamics, Plasma Propagation and other topics related to plasma. Plasma physicists study plasmas, which are considered a distinct state of matter and occur naturally in stars and interplanetary space .The knowledge acquired by the student can be used in various field of Physics and thus career prospects are bright in the field of research. |   |                                   |
| Credits: 4   |   | Core<br>Compulsory                |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   |   | <b>Min. Passing<br/>Marks: 36</b> |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |   |                                   |
|  |   |                                   |
| <b>UNIT</b>  | <b>TOPIC</b>  | <b>No. of Lectures</b>            |
| <b>UNIT I</b>  | <b>Introduction to Plasma</b><br>Elementary concept of plasma: Debye Shielding, Plasma parameters, Drift of guiding center, Gradient drift, Curvature drift, Magnetic mirror, Plasma confinement  | <b>15</b>                         |
| <b>UNIT II</b>   | <b>Magneto-Hydrodynamics and Fluid Plasma</b><br>Plasma Oscillation, Fluid equations for a plasma, Continuity equation, Wave Propagation in unmagnetized plasma, Magneto Hydrodynamics , Hydrodynamical description of Plasma: fundamental equation, Concept of convective derivative, hydromagnetic waves, magneto-sonic and Alfvén waves. | <b>15</b>                         |
| <b>UNIT III</b>  | <b>Magneto Plasma</b><br>Wave phenomena in Magneto plasma: Polarization, Phase velocity, group velocity, cutoff, resonance for electromagnetic wave propagating parallel and perpendicular to the magnetic field Helicon, Faraday rotation,.  | <b>15</b>                         |
| <b>UNIT IV</b>   | <b>Electromagnetic Wave Propagation in Plasma</b><br>Propagation at finite angle and CMA diagram, Propagation through ionosphere and magnetosphere Derivation of moment Equation from Boltzmann Equation, Momentum balance equation, Equations of state, Two-fluid equations, Plasma resistivity  | <b>15</b>                         |
| <b>Suggested Readings:</b><br>Jackson: Classical Electrodynamics; Wiley Eastern, New Delhi   |   |                                   |

| <b>MASTER IN PHYSICS</b>  |  |  |
|---|--|--|
| Programme: <b>MASTER IN PHYSICS</b>   | YEAR V   | SEMESTER IX<br>PAPER III a<br>(Specialization paper) |
| <b>Subject: Physics</b>   |  |  |
| Course code   | Course Title: <b>Advanced Electronics- I</b>   |  |
| Course Outcomes:  |  |  |
| This course helps the students to gain basic ideas of the construction and working of electronic devices and circuits . The course includes the study of IC technology, Operational amplifier as linear Analog systems and non-linear analog systems. The course is of much practical purpose for the students to learn basics of integrated circuit technology which has wide applications in computing, process control, signal processing, communication systems, digital instruments etc. |  |  |
| Credits: 4  | Core Compulsory  |  |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>  | <b>Min. Passing Marks: 36</b>  |  |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0  |  |  |
| <b>UNIT</b>   | <b>TOPIC</b>   | <b>No. of Lectures</b>                               |
| <b>UNIT I</b>   | <b>Transmission Lines:</b><br>Types of transmission lines, transmission line as a two conductor system, transit time effect, calculation of line parameters, voltage and current relation on radio frequency transmission line, propagation constant and its physical significance, line distortion and attenuation, characteristic impedance, reflection coefficient, loss less, distortion less and low loss transmission lines, line termination by (i) zero load or short circuit line, (ii) infinite impedance, (iii) some resistance, (iv) complex impedance, voltage standing wave ratio. | <b>15</b>  |
| <b>UNIT II</b>  | <b>Propagation of Radio Waves:</b> Ground wave, space wave and sky wave propagation (ionosphere & it's different regions, Eccles-Larmor theory, magneto ionic theory, Appleton-Hartree formula, skip distance and maximum usable frequency).   | <b>15</b>  |
| <b>UNIT III</b>   | <b>Amplitude Modulation &amp; Demodulation and Receiver &amp; Transmitters:</b> Need for modulation, type of modulation, amplitude modulators (square law diode & collector modulation methods), amplitude demodulators (square law & envelope detectors), DSB-SC system (balanced modulator and synchronous detector), SSB-SC signal (frequency & phase discrimination method of modulation and demodulation), VSB signal (filter & phase discrimination method of modulation), AM receivers (TRF & superheterodyne, AGC), AM transmitter.  | <b>15</b>  |
| <b>UNIT IV</b>  | <b>Antenna :</b> Radiation, flared transmission line, magnetic vector potential and electric scalar potentials, different electric and magnetic fields generated by Hertz dipole, near and far fields, power radiated by Hertz dipole, radiation pattern, Directivity, gain of the antenna, dipole antenna, HF antenna, Yagi antenna, loop antenna, reflector antennas.  | <b>15</b>  |

**Suggested Readings:**

Antennas and Wave Propagation', J.D. Kraus, R.J. Marhefka and A.S. Khan, TMH

'Communication Systems: Analog & Digital', R.P. Singh and S.D. Sapre, TMH

Antenna & Wave Propagation', K.D. Prasad, Satya Prakashan, New Delhi. Mcgraw Hill

Millman and Halkias: Electronic Fundamentals & Applications, Tata Mcgraw Hill

Millman and Halkias: Integrated Electronics

K.R. Botkar: Integrated Circuits, Khanna Publishers G.K.

Mithal and Ravi Mittal: Electronic Devices & Circuits, Khanna Publishers

Roychaudhary and Jain: Operational Amplifier & Linear Integrated Circuits

V.K. Mehta: Electronics for Scientists & Engineers Robert J Goldston and Paul H. Rutherford: Introduction to Plasma Physics

| <b>UNIT</b>  | <b>TOPIC</b>  | <b>No. of Lectures</b>                               |
| <b>UNIT I</b>  | Spherical Astronomy Celestial sphere, Celestial coordinate system (equatorial and alt-azimuth): altitude and azimuth, right ascension and declination, hour angle, sidereal time, mean solar time, summer and winter solstice, seasons. Distance measurements: AU, parsec, standard candles, distance measurement by geometric means (parallax, distances to open clusters).  | <b>15</b>  |
| <b>UNIT II</b>   | Solar System Idea of solar system, Study of planets and their satellites, Earth-Moon system, tidal forces, asteroids, meteors, comets and their origin, composition and dynamical evolution, extra solar planets and their detection.   | <b>15</b>  |
| <b>UNIT III</b>  | Telescopes: Basic Optics, Types of telescopes. Telescope mounting systems. Optical telescopes, Infrared, Ultraviolet, X-ray and Gamma-ray telescopes. Schmidt telescopes. Solar telescopes. Design and construction of a simple optical telescopes. Active and adoptive optics in astronomical study. Sky charts and their importance.  | <b>15</b>  |
| <b>UNIT IV</b>   | Classification of detectors, characteristics of detectors. Detectors for optical and infrared wavelength regions. Working of Charge Coupled Device (CCD). sensitivity, noise, quantum efficiency, spectral response, Johnson noise, signal to noise ratio, Application of CCD for stellar imaging, photometry and spectroscopy. Importance of space based astronomy. Observational techniques of astronomical sources from space in | <b>15</b>  |

|   |   |  |
|---|---|--|
|   | infrared, EUV, X-ray and Gamma-ray regions of the electromagnetic spectrum. |  |

| MASTER IN PHYSICS  |  |                               |
|--|--|-------------------------------|
| Programme: <b>MASTER IN PHYSICS</b>  | YEAR V   | SEMESTER IX<br>PAPER IV a     |
| <b>Subject: Physics</b>  |  |                               |
| Course code  | Course Title: <b>Advanced Electronics- II</b>  |                               |
| Course Outcomes:   |  |                               |
| This course helps the students to gain basic ideas of the digital communication, optical communication, memory and optoelectronic devices. The course is of much practical purpose for the students to learn advanced concepts of digital communication systems. |  |                               |
| Credits: 4   |  | Core<br>Compulsory            |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   |  | <b>Min. Passing Marks: 36</b> |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |  |                               |
| <b>UNIT</b>  | <b>TOPIC</b>   | <b>No. of Lectures</b>        |
| <b>UNIT I</b>  | <b>Modulation Techniques:</b><br>Angle modulation (PM & FM), relation between PM & FM, FM generation (direct, varactor diode & reactance tube methods), frequency demodulators (slop & balanced slope method), pulse modulation (PAM & PWM) and demodulation, discretization in time and amplitude, concept of quantization, pulse code modulation (PCM), basic idea of digital telemetry and digital signal processing.   | <b>15</b>                     |
| <b>UNIT II</b>   | <b>Microwave production and Microwave Communications:</b><br>Microwave frequencies, advantages of microwaves, limitation of conventional electronic devices at UHF, microwave measurements devices and instrumentation, measurement of power, principle of velocity modulation, two cavity klystron, reflex klystron, transferred electron devices (TEDs), Gunn-effect diodes (GaAs diode only): RWH theory, mode of operation. Satellite communication.                 | <b>15</b>                     |
| <b>UNIT III</b>  | <b>Fiber Optics:</b><br>Evolution of fiber optics, advantages and classification of fibers, acceptance angle, numerical aperture, propagation of light waves in step index and graded index fibers, optical fiber modes and configurations, attenuation in optical fibers, light sources, detectors and their characteristics, optical communication system, optical fiber sensors: intensity modulated and interferometric optical fiber sensors.                       | <b>15</b>                     |
| <b>UNIT IV</b>   | <b>Power Supply Regulation:</b> Load regulation, line regulation and output resistance of a power supply, shunt & series regulators and their short circuit protection, monolithic linear regulators: classification, LM78XX & LM79XX series, regulated dual supplies and adjustable regulators, current boosters and their short circuit protection, unregulated DC to DC converters, switching regulators: buck, boost and buck-boost regulators, Precision rectifier. | <b>15</b>                     |

| <b>MASTER IN PHYSICS</b>   |   |                           |
|--|---|---------------------------|
| Programme: <b>MASTER IN PHYSICS</b>  | YEAR V  | SEMESTER IX<br>PAPER IV b |
| <b>Subject: Physics</b>  |   |                           |
| Course code  | Course Title: <b>Astrophysics –II</b>   |                           |
| Course Outcomes:   |   |                           |
| The Course will provide the deeper understanding of the radiative transfer and the interaction of radiation with matter. It would be important to understand the physics of the death of stars. This study is crucial for the deeper knowledge of the neutron stars, white dwarfs and black holes. Their study provides the insight for the gravitational waves. |   |                           |
| Credits: 4   | Core Compulsory   |                           |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   | <b>Min. Passing Marks: 36</b>   |                           |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |   |                           |
| <b>UNIT</b>  | <b>TOPIC</b>  | <b>No. of Lectures</b>    |
| <b>UNIT I</b>  | Radiation transfer: Definitions of specific intensity, mean intensity, flux and energy density; Equation of radiation transfer; solutions in some specific cases, optical depth; Thermal emission; Blackbody spectrum and its characteristics; Kirchoff's law; Einstein coefficients.   | <b>15</b>                 |
| <b>UNIT II</b>   | Interior Properties of Stars Hydrostatic equilibrium, Virial theorem, Polytrophic indices, Lane – Emden equation LTE, Radiative equilibrium, stability condition of convective and radiative equilibrium, Continuous spectra of stars, Stellar opacity, limb darkening, line blanketing, theory of Fraunhofer lines, curve of growth and line broadening. | <b>15</b>                 |
| <b>UNIT III</b>  | Elementary theory of white dwarfs, Chandrashekhar's limit for white dwarf stars, neutron stars their birth and properties, Pulsars, black holes, low medium mass star and high mass stars, death of high mass stars, supernova remnants..   | <b>15</b>                 |
| <b>UNIT IV</b>   | AGNs and Quasi-stellar Objects Theory of AGNs, Syferts, quasars and their energy generation and redshift anomaly. Different AGN models, radio lobes and jets, Gamma ray bursts.   | <b>15</b>                 |
| <b>Suggested Readings:</b>   |   |                           |

| <b>MASTER IN PHYSICS</b>   |  |                           |
|--|--|---------------------------|
| Programme: <b>MASTER IN PHYSICS</b>  | YEAR V   | SEMESTER IX<br>PAPER IV c |
| <b>Subject: Physics</b>  |  |                           |
| Course code  | Course Title: <b>High Energy Physics-II</b>  |                           |
| Course Outcomes:   |  |                           |
| The course would provide the knowledge of basic building blocks of matter and its complex properties. The students will also be able to know the complicated theory of Higgs mechanism which led to the detection of God particle in LHC experiment in the year 2012. It would open doors for the students who want to work in the field of HEP. |  |                           |
| Credits: 4   | Core Compulsory  |                           |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   | <b>Min. Passing Marks: 36</b>  |                           |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |  |                           |
| <b>UNIT</b>  | <b>TOPIC</b>   | <b>No. of Lectures</b>    |
| <b>UNIT I</b>  | Lie Groups and Lie Algebra Symmetries, Groups and conservation laws, Lie groups and their generator, representation of the groups, Lie Algebra, Different dimensions and parameter groups-their generators and algebra, Simple and semi-simple Lie Algebra, Standard form of Lie Algebras, Root diagrams for groups of different rank.                 | <b>15</b>                 |
| <b>UNIT II</b>   | Quark Model Fermi Yang model, Sakata model, Necessity of Quark model, Shortcomings of Eight fold way, Gell - Mann Zweig model, Quark-Lepton symmetry and structure of Hadrons, Need of charm quantum number and charmed quark, Elementary idea of charm, bottom and top quarks, Baryon magnetic moments in quark model, Experimental status of Quarks. | <b>15</b>                 |
| <b>UNIT III</b>  | Gauge Field Theories Concept of gauge fields and gauge connections, Principle of gauge invariance, Global and local Abelian gauge invariance, U(1) gauge invariance of QED.  | <b>15</b>                 |
| <b>UNIT IV</b>   | Yang- Mills gauge field, Non-Abelian gauge field theory (SU(2) case), Concept of spontaneous symmetry breaking and Goldstone Bosons, Higgs Mechanism with physical examples and mass generation for gauge fields   | <b>15</b>                 |
| <b>Suggested Readings:</b>   |  |                           |

|---|--|-------------------------------|
| Programme: <b>MASTER IN PHYSICS</b>   | YEAR V   | SEMESTER IX<br>PAPER IVe      |
| <b>Subject: Physics</b>   |  |                               |
| Course code   | Course Title: <b>Condensed Matter Physics -II</b>  |                               |
| Course Outcomes:  |  |                               |
| The present syllabus provides knowledge about the basic concepts, principles and the various properties exhibited by condensed matter, especially solids to the students. The course widens the domain knowledge of ferroelectrics. The course also develops the basic knowledge of superconductors and their properties. This course also deals with the topics like transport properties and magnetic resonance, and imparts knowledge to the students. |  |                               |
| Credits: 4  |  | Core Compulsory               |

| Programme: <b>MASTER IN PHYSICS</b>  | YEAR V  | SEMESTER X<br>PAPER I             |
| <b>Subject: Physics</b>  |   |                                   |
| Course code  | Course Title: <b>Nuclear Physics</b>  |                                   |
| Course Outcomes:   |   |                                   |
| In this course students would know about the general properties of nuclei, nuclear forces and detectors, radioactive decay and nuclear reactions. The course builds a foundation for the students to carry out research in the field of nuclear physics, high energy physics, nuclear astrophysics, nuclear reactions and applied nuclear physics. |   |                                   |
| Credits: 4   |   | Core<br>Compulsory                |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   |   | <b>Min. Passing<br/>Marks: 36</b> |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |   |                                   |
|  |   |                                   |
| UNIT   | TOPIC   | No. of<br>Lectures                |
| <b>UNIT I</b>  | Nuclear Properties and Nuclear Models Concepts of Atomic Nuclear-Size, Shape, charge distribution, spin & parity, magnetic moment; electric quadrupole moment; binding energy; semi-empirical mass formula, mirror nuclei, Liquid drop model, Experimental evidence for shell effects, Shell model, Magic numbers, Spin orbit coupling, Single particle shell model-its validity and limitations; collective model. | <b>15</b>                         |
| <b>UNIT II</b>   | Nuclear Forces and Nuclear Interactions Theory of Deuteron and nuclear level properties, nucleon - nucleon interactions, low & highenergy nucleon-nucleon scattering, Yukawa's Meson theory of nuclear forces, Spin dependence and charge independence of nuclear forces.   | <b>15</b>                         |
| <b>UNIT III</b>  | Nuclear Reactions Kinds of nuclear reactions; Conservation laws; Nuclear reaction Kinematics; charge particle reaction spectroscopy; neutron spectroscopy; nuclear cross-section; compound nucleus; Nuclear transmutations, continuum theory of nuclear reaction, Nuclear fission, Chain reactions, Nuclear fusion, Thermonuclear reactions.  | <b>15</b>                         |
| <b>UNIT IV</b>   | Nuclear Decays Basic understanding of $\alpha$ and $\beta$ - decay, Fermi theory of beta decay, selection rules in $\beta$ -decay, Neutrino hypothesis, Parity violation in beta decay, K capture and internal conversion.  | <b>15</b>                         |
|  |   |                                   |

| <b>UNIT</b>  | <b>TOPIC</b>   | <b>No. of Lectures</b>    |
| <b>UNIT I</b>  | Sun as a star : Solar spectrum, effective temperature, luminosity, photospheric absorption lines, limb darkening; energy source: Kelvin time scale, nuclear fusion; energy transport in the sun, Thomson scattering, mean free path, photon diffusion inside the Sun; photosphere, chromosphere, transition region, corona.                                    | <b>15</b>                 |
| <b>UNIT II</b>   | Quiet and Active Sun, Sunspots, their formation and magnetic field, Solar flares, Solar filaments/prominences, Coronal mass ejections (CMEs), Solar wind, Different type of solar eruptions models, Coronal heating, Origin of solar cycle.  | <b>15</b>                 |
| <b>UNIT III</b>  | General idea of Helioseismology, Astroseismology, Description about p-mode and g-mode oscillations, Introduction to variable stars and their locations in H-R diagram. Classifications, Cepheids variables (classic Cepheids and W Virginis stars), RR Lyrae stars, Mira variables, Eruptive variables, Flare stars, Nebular variables, Supernovae, roAP stars | <b>15</b>                 |
| <b>UNIT IV</b>   | The Milky way and Other Galaxies Distributions of stars in the Milky way, Morphology, Kinematics, Interstellar medium, Galactic center. External galaxies, Types of galaxies: spirals, ellipticals and irregulars, Hubble classification for galaxies, 21cm line, rotation curve, dark matter.   | <b>15</b>                 |
| <b>Suggested Readings:</b><br>Stix: The Sun: An Introduction<br><br>K. D. Abhyankar : Astrophysics: Stars and Galaxies   |  |                           |

| <b>UNIT</b>  | <b>TOPIC</b>   | <b>No. of Lectures</b>    |
| <b>UNIT I</b>  | Relativistic Propagators Relativistic propagators using quantized formulation of free fields, Properties of quantized scalar fields(Real and complex cases), Algebra of field operators, covariant form of the field operators algebras, (Covariant commutation relations), Meson propagator and its characteristics, Properties of quantized spinor fields, Algebras of spinor field operator, Covariant form of anti-commutation relations, Fermion propagator and its characteristics, properties of quantized EM field, Covariant commutation relations of EM field operators, Photon propagator and its characteristics, EM interaction in terms of radiation field and instantaneous coulomb fields. | <b>15</b>                 |
| <b>UNIT II</b>   | Operator Products, Feynman Propagators and S-matrix Expansion Various type of operator products (Normal, Dyson products and Chronological T-products), Wick's theorem, Feynman propagators and its physical interpretation, Interacting fields, S-Matrix formulation as a perturbative series solution of collision processes, Dyson expansion of S-matrix.  | <b>15</b>                 |
| <b>UNIT III</b>  | S-matrix Formulation of QED Interaction Hamiltonian in QED, Reduction of S-matrix for the case of QED, Representation and description of various first and second order processes in QED using S-matrix expansion.   | <b>15</b>                 |
| <b>UNIT IV</b>   | Compton scattering, Moller scattering, Bhabha scattering, Electron self energy, Photon self energy, vacuum configuration in QED, Feynman diagrams and Feynman Rules in QED.  | <b>15</b>                 |

| In this course the students would study the various types of lasers, Laser spectroscopy and their applications in science and technology. Knowledge acquired by the course will be of much use for various industries and R&D sector . |  |                           |
| Credits: 4   | Core Compulsory  |                           |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   | <b>Min. Passing Marks: 33</b>  |                           |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |  |                           |
| <b>UNIT</b>  | <b>TOPIC</b>   | <b>No. of Lectures</b>    |
| <b>UNIT I</b>  | Molecular Symmetries and Group Theory Symmetry Properties of molecule: symmetry element, symmetry operation and point group, character table, Group theory: representation of a group, reducible and irreducible representations, LCAO coefficient of a polyatomic molecule, Huckel approximation, overlap and resonance integrals, Wheel's approximation. | <b>15</b>                 |
| <b>UNIT II</b>   | Mechanism of Fluorescence Emission and decay mechanism, radiative & nonradiative processes, Jablonski diagram, Kasha rule, Fluorescence lifetime and quantum yield, stoke shift, Mirror image rule, Oscillator strength, Fluorescence polarisation and Anisotropy, Time scale of molecular processes in solution .   | <b>15</b>                 |
| <b>UNIT III</b>  | Instrumentation for Fluorescence Spectroscopy Excitation and Emission spectra, An ideal spectrofluorometer Distribution in Excitation & Emission spectra, Light sources, Monochromator,  | <b>15</b>                 |
| <b>UNIT IV</b>   | Optical filters, Photomultiplier tubes, Photon counting versus Analog detection of Fluorescence Corrected Fluorescence spectra, Measurement of Fluorescence lifetime   | <b>15</b>                 |
| <b>Suggested Readings:</b>   |  |                           |
| Barrow G. M: Introduction to Molecular spectroscopy; McgrawHill  |  |                           |
| Herzberg G: Infrared and Raman Spectra of Polyatomic Molecules;  |  |                           |
| Von Nostrand Herzberg G: Spectra of Polyatomic Molecules;  |  |                           |
| on Nostrand J. R. Lackowicz: Principle of Fluorescence   |  |                           |

| <b>MASTER IN PHYSICS</b>  |   |                          |
|---|---|--------------------------|
| Programme: <b>MASTER IN PHYSICS</b>   | YEAR V  | SEMESTER X<br>PAPER IV A |
| <b>Subject: Physics</b>   |   |                          |
| Course code   | Course Title: <b>Advanced Electronics-IV</b>  |                          |
| Course Outcomes:  |   |                          |
| <p>This course helps the students to gain basic ideas of the construction and working of electronic devices and circuits. The course includes the study of combinational circuits, sequential circuits and analog computation. The course is of much practical purpose for the students to learn basics of digital electronics. The digital electronics has wide applications in computing, process control, signal processing, communication systems, digital instruments etc.</p> |   |                          |
| Credits: 4  | Core<br>Compulsory  |                          |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>  | <b>Min. Passing<br/>Marks: 36</b>   |                          |

| MASTER IN PHYSICS  |  |                         |
|--|--|-------------------------|
| Programme: MASTER IN PHYSICS   | YEAR V   | SEMESTER X<br>PAPER IVe |
| <b>Subject: Physics</b>  |  |                         |
| Course code  | Course Title: <b>Condensed Matter Physics -IV</b>  |                         |
| Course Outcomes:   |  |                         |
| This course develops the fundamental understanding of various characterization techniques. The course covers in details X-ray diffraction, SEM, TEM etc.   |  |                         |
| Credits: 4   | Core Compulsory  |                         |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>   | <b>Min. Passing Marks: 36</b>  |                         |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 4-0-0   |  |                         |
|  |  |                         |
| <b>UNIT</b>  | <b>TOPIC</b>   | <b>No. of Lectures</b>  |
| <b>UNIT I</b>  | <b>Structural Characterization and Analysis:</b> Introduction to materials characterization, Bragg's Law, Generation and detection of X-rays, X-ray diffraction methods (XRD), Determination of crystal structure, Lattice Parameter, Crystallite Size, Lattice Strain measurements, Williamson Hall Plot; Electron diffraction. | <b>15</b>               |
| <b>UNIT II</b>   | <b>Electron Microscopy and Surface Analysis:</b> Interaction of electrons with solids, Scanning electron microscopy (SEM), Transmission electron microscopy (TEM), Scanning transmission electron microscopy (STEM), Scanning Probe Microscope (SPM): Atomic force microscopy (AFM), scanning tunneling microscopy (STM).        | <b>15</b>               |
| <b>UNIT III</b>  | <b>Optical and Thermal Characterization:</b> Optical Microscopy, UV/Visible spectroscopy, Fourier Transform Infrared spectroscopy (FTIR), Atomic absorption spectroscopy (AAS), Raman spectroscopy. Thermo gravimetric analysis (TGA), Differential thermal analysis (DTA), Differential Scanning Calorimetry (DSC).             | <b>15</b>               |
| <b>UNIT IV</b>   | <b>Magnetic Characterization:</b> Spectroscopy Techniques: Basic of nuclear magnetic resonance (NMR) and electron spin resonance (ESR) spectroscopy, Magnetic Measurements: Vibrating Sample Magnetometer (VSM), Superconducting Quantum Interference Device (SQUID), Magnetic Force Microscopy, Mössbauer Spectroscopy.         | <b>15</b>               |
| <b>Suggested Readings</b>  |  |                         |
| <ol style="list-style-type: none"> <li>1. Poole C.P., Owens Jr. Frank J., Introduction to Nanotechnology, Wiley India Pvt. Ltd.</li> <li>2. | MASTER IN PHYSICS   |  |                         |
|---|--|-------------------------|
| Programme: <b>MASTER IN PHYSICS</b>   | YEAR V   | SEMESTER X<br>PRACTICAL |
| <b>Subject: Physics</b>   |  |                         |
| Course code   | Course Title: PRACTICAL  |                         |
| Course Outcomes:  |  |                         |
| The student will have adequate knowledge to perform the experiments of different fields of physics with clear understanding of the theory behind the experiment.<br>Student will know about advanced experiments based on their specialization paper. |  |                         |
| Credits: 4  | Core<br>Compulsory   |                         |
| <b>Max. Marks: 100</b><br><b>External Exam: 75</b><br><b>Internal assessment: 25</b>  | <b>Min. Passing<br/>Marks: 36</b>  |                         |
| Total No. of Lectures-Tutorials-Practical (in hours per week): 0-0-4  |  |                         |
| UNIT  | TOPIC  | No. of Lectures         |
|   | <b>List of Experiments: (a) Advanced Electronics</b><br>1. Study of regulated power supply (723).<br>2. Study of operational amplifier (741).<br>3. Study of Timer (555). 4. A to D and D to A converter<br>5. 1 of 16 Decoder/Encoder<br>6. Study of Multiplexer/Demultiplexer<br>7. Study of Logic gates (Different types)<br>8. Study of Comparator and Decoder<br>9. Study of amplitude and frequency modulations and demodulations.<br>10. Study of different flip- flop circuits (RS, JK, Dk type, T-type, Master slave).<br>11. Study of Digital combinational and sequential circuits<br>12. Study of Microprocessor (8085) 13. Study of SCR, DIAC, TRIAC<br>14. Study of IC- Based Power supply<br>15. Microwave experiment.<br>16. Shift Registers<br>17. Fiber Optics communication | <b>60</b>               |
|   | <b>List of Experiments: (b) Astrophysics</b><br>1. Study of Hubble's law (from given data)<br>2. Study of constant density neutron star<br>3. Study of the static parameters of a Neutron Star model with inverse square density distribution<br>4. Study of star cluster from a given data<br>5. Study of Extinction coefficients   | <b>60</b>               |

|   |   |           |
|---|---|-----------|
|   | 6. Study of variability of stars  |           |
|   | <p><b>List of Experiments: (c) High Energy Physics</b></p> <ol style="list-style-type: none"> <li>1. Characteristic curve of a GM Detector and verification of inverse square law.</li> <li>2. Characteristic curve of a GM Detector and Absorption coefficient of a using aluminum GM Detector.</li> <li>3. Energy spectrum of gamma rays using gamma ray spectrometer.</li> <li>4. Absorption coefficient of aluminum using gama-ray spectrometer.</li> <li>5. Characteristics of Scintillation Detector.</li> <li>6. Study of gama-gama unperturbed angular correlations.</li> <li>7. Study of particle tracks using a Nuclear Emulsion Detector.</li> <li>8. Classification of tracks in interaction with Nuclear Emulsion and determination of excitation energy.</li> </ol> | <b>60</b> |
|   | <p><b>List of Experiments: (d) Spectroscopy</b></p> <ol style="list-style-type: none"> <li>1. Study of the vibrational levels of Iodine.</li> <li>2. Measurement of the fluorescence spectra of Uranyl Nitrate Hexahydrate.</li> <li>3. Determination of the intrinsic life time for a dye molecule.</li> <li>4. Determination of change in dipole moment in excited state using Solvatochromic shift method.</li> <li>5. Measurement of non radiative decay rate for a known sample.</li> <li>6. Determination of the quantum yield of known samples using steady state spectroscopy.</li> </ol>   | <b>60</b> |
|   | <p><b>List of Experiments: (e) Condensed Matter Physics</b></p> <ol style="list-style-type: none"> <li>1. To determine the crystallite size of a nanomaterial using Debye Scherrer method</li> <li>2. To determine the band gap energy of a material</li> <li>3. To undersatand the microstructural features of ceramics</li> <li>4. Study and analysis of FTIR spectra</li> <li>5. To study I-V characteristics of a semiconductor</li> <li>6. To study the surface morphology of a material be SEM</li> <li>7. Synthesis of nanoparticle using sol-gel method</li> <li>8. Determination of lattice parameters using XRD technique</li> </ol>  | <b>60</b> |
